

"Blocked routes, alternate crossings, and sign and signal information should be communicated to pedestrians with vision disabilities by providing devices such as audible information devices or barriers and channelizing devices that are detectable to the pedestrians traveling with the aid of a long cane or who have vision disabilities."

- MUTCD 11th Edition

FEATURES & BENEFITS:

- » Motion detection
- » Automatic & manual volume adjustment
- » Up to 60-second recording
- » Mounts to a standard traffic control devices
- » Rechargeable batteries and charger included
- » Water-resistant housing
- » Tamper resistant casing
- » Compatible with test-to-speech programs
- » Optional microphone not included

PARAKEET BENEFITS:

The Parakeet™ is an Audible Information Device (AID) designed for custom messaging with a built-in speaker and ambient microphone.

When roads and sidewalks are closed, Parakeet allows for up to 60-seconds of pre-recorded instructions to the alternate path for visually impaired pedestrians.

The device recording is motion activated, responding to pedestrians as they approach and not as they move away. Additionally, the built-in microphone automatically adjusts its decibel level based on surrounding noise throughout the day. Parakeet is designed for outdoor use only.
